INTERNATIONAL CONFERENCE THEME

The world in which we are living today is very complex. People are running and running and there is hot chase for the thing which they have fixed in their minds. There is rapid growth of industries, vast expansion of cities and uncontrolled increase in human population. All these things have posed serious threats to our biodiversity and environment. Over the past several years in the name of development we are putting Nature at stake. The atmosphere, oceans, mountains, land, forests and all life forms including human beings are very closely inter connected inter related and inter dependent. If there is change in one attribute of the environment, the other part cannot remain unaffected. The theme of the present conference has three very important and interrelated keywords ENVIRONMENTAL CHANGES BIODIVERSITY AND SUSTAINABLE RESOURCE MANAGEMENT. Many organizations have been studying these parameters of human society which have profound influence on human life. The earth has gifted an environment for evolution of life and natural resources for its subsistence. In the history of man environment relationship, first the dominance of environment over prehistoric man occurred whereby his activities were controlled and determined by the environment. With the development of science and technology man's dominance against environment started with uncontrolled and un mindful exploitation of exhaustible natural resources without thinking of its hazardous implications for future generations for the immediate benefit of mankind. Over-exploitation of natural resources has led to their large-scale depletion. Forest cover worldwide is decreasing at an alarming rate. For instance, forest cover has decreased around 3% in India since Independence. This is typical of the whole world. They are illegally cutting down forest in the Amazon and Congo River basins, severely depleting the biodiversity spectrum year by year. Non-renewable resources are vanishing. It is estimated that within the next 30 years both petrol and gas supplies will run out; similarly there will be no more coal or metals available for the use. Pattern varies widely from country to country. When we look upon the natural resource reservoir in the world. We find an abundance of resources forest, water, land more or less everywhere. Only an under-usage of resources has created imbalances in development. Many African, South Asian and South American countries cannot use their natural resources well, whereas European, North American and Northeast Asian countries have over-used their natural resources, thus has created the imbalance between those who have and those who are without resources.

TECHNICAL SESSION

The technical sessions of the Conference will focus on the following themes.

- 1) Biodiversity, Biogeography and Environment.
- 2) Remote sensing, GIS and GPS in Geographical studies.
